DEMOCRATIC DECENTRALIZED RESISTANCE

by World Liberty Congress and Human Rights Foundation

WHY DEMOCRATIC DECENTRALIZED RESISTANCE?

Around the world, **authoritarian regimes are weaponizing technology**, using surveillance, censorship, and digital control to silence dissent and restrict freedom. But **the same tools being used to oppress can also be reclaimed to protect.**

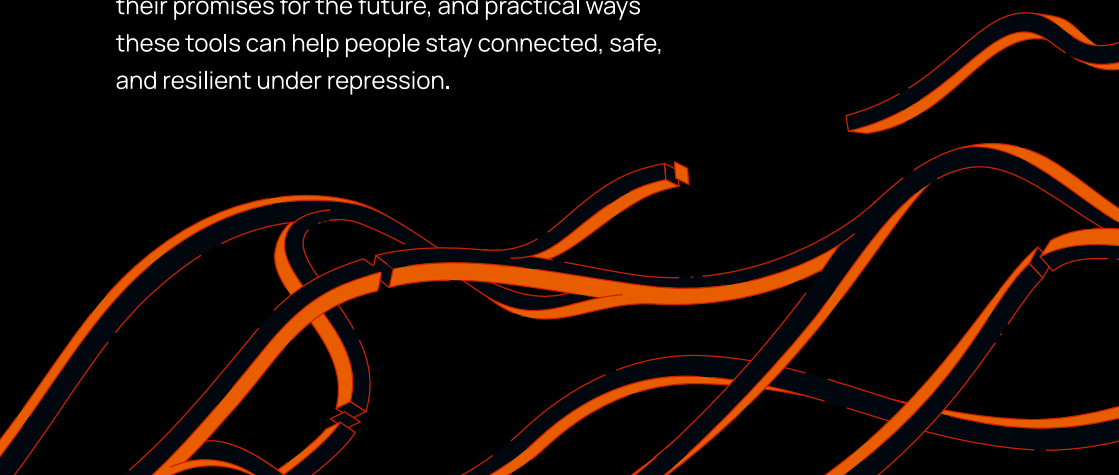

Democratic Decentralized Resistance was created to explore **how open, transparent, and community-driven technologies can restore agency** where centralized power has taken it away.

Launched in September 2025, the program is expanding to support activists in **Venezuela, Nicaragua, Cambodia, Zimbabwe, Afghanistan, and Iran**, focusing on **practical training in decentralized technologies** that help people **protect privacy, overcome censorship, and keep communication alive** under repressive conditions.

WHAT TO EXPECT

Today we've brought together activists from targeted regions and builders of freedom tech to learn from each other, share experiences, and collaborate on real solutions.

Throughout the day, we'll explore cutting-edge technological developments, their promises for the future, and practical ways these tools can help people stay connected, safe, and resilient under repression.

FREEDOM TOOLS

Real decentralization isn't just about technology, it's about freedom.

We need ways to save and send money that no one can freeze, to speak online without being silenced, and to work, communicate, and protect information on our own terms.

The right combination of tools forms the foundation of a **digital resistance**:

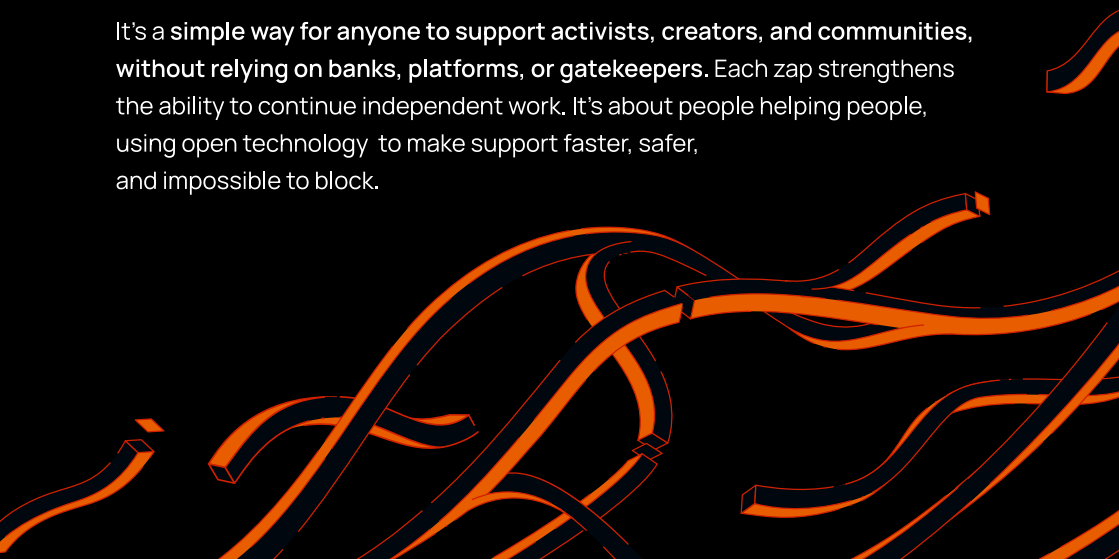

UNBLOCKABLE: Nostr for censorship-resistant publishing
UNTRACEABLE: Bitcoin for borderless fundraising
UNSTOPPABLE: AI for strategic action and memory preservation

Together, these technologies open new paths for people to **organize securely, fund their work**, and **stay connected**, even in the most restricted environments.

DECENTRALIZED MICROPHILANTHROPY

We're introducing the concept of **Decentralized Microphilanthropy — small, direct contributions sent instantly through Nostr zaps.**

It's a **simple way for anyone to support activists, creators, and communities, without relying on banks, platforms, or gatekeepers.** Each zap strengthens the ability to continue independent work. It's about people helping people, using open technology to make support faster, safer, and impossible to block.

AGENDA

12:00 pm · **REGISTRATION & AGORA APP ONBOARDING**

01:00 pm · **OPENING TALK** [Leopoldo Lopez]

01:15 pm · **PANEL: ACTIVISM:**
DEMOCRATIC DECENTRALIZED RESISTANCE
[Leopoldo Lopez, Courtney Mukoyi, Samady Ou,
Aaron Rodríguez, Berta Valle, Maryam Khaden]

01:35 pm · **NOSTR: DECENTRALIZED COMMUNICATIONS PROTOCOL**

- **Secure and private messaging** by Jeff Gardner
- **Open source publishing ecosystem for uncensorable journalism** by Antonio Rodriguez
- **Agora: Nostr client for Activists** by Pablo Fernandez & Jesus Gonzalez

02:30 pm · **COFFEE BREAK**

03:00 pm · **BITCOIN**

- **Bitcoin donations and the future of networks scalability** by Kukks
- **Expanding Bitcoin's Usability and Privacy with eCash** by Calle

04:00 pm · **ARTIFICIAL INTELLIGENCE**

- **AI for Human Rights** by Justin Moon
- **How AI and decentralization are reshaping media freedom and resistance to censorship** by Zaven Petrosyan

05:00 pm · **FIRESIDE CHAT: DECENTRALIZED MICROPHILANTHROPY**
[Leopoldo Lopez & Anaise Kanimba]

05:30 pm · **FOCUS GROUPS: BUILDING THE MANIFESTO**

06:00 pm · **NETWORKING HOURS: OPEN BAR, BUFFET,**
DJ SET, AGORA APP ONBOARDING,
AND BITCOIN HANDS-ON EXPERIENCE

SPEAKERS

LEOPOLDO LOPEZ • Leopoldo López is a freedom activist from Venezuela. He was a political prisoner from 2014 to 2020, after being sentenced to fourteen years in prison for leading non-violent street protests and civil resistance in 2014. After spending seven years in confinement, he managed to escape the autocratic regime of Nicolás Maduro. Today, Leopoldo serves as Secretary General at the World Liberty Congress, where he continues to advocate for global democratic movements and support technologies that enable freedom in closed societies.

COURTNEY MUKOYI • Courtney Mukoyi is a Zimbabwean CivicTech activist and founder of Justice Code Foundation, leveraging AI and blockchain to promote human rights and civic engagement. A member of the UN Human Rights Youth Advisory Board, he champions youth inclusion in democracy and transforms technology into tools for justice, empowering citizens and strengthening democracy in challenging political environments across Zimbabwe and Africa.

SAMADY OU • Samady Ou is a Cambodian democracy advocate who grew up under dictatorship in Phnom Penh before studying law and management in the United States. As an HRF Freedom Fellow and youth vice chairman of the Council of Asian Liberals and Democrats, he champions Cambodian democracy through global awareness campaigns. A Youth Ambassador for the Khmer Movement for Democracy, he organizes diaspora activism and pushes for legislative efforts like the Cambodian Democracy and Human Rights Act. Despite personal risks, Samady mentors young activists and leverages social media to connect resistance movements across borders, transforming exile into a platform for democratic change.

MARYAM KHADEN • Maryam Khadem is an Iranian freedom activist and advocate for women's rights, digital freedom, and secure access to information. With years of experience supporting civil society initiatives inside and outside Iran, she focuses on empowering communities through education, technology, and efforts to provide free and unfiltered internet to people in Iran.

SPEAKERS

AARON RODRÍGUEZ • Aaron Rodríguez is a Venezuelan activist and freedom advocate with over 18 years of experience in civic and political movements. A member of the World Liberty Congress, he works at the intersection of artificial intelligence and emerging technologies to strengthen civic action and democratic resilience. With a background in dentistry, political studies, leadership, and political communication, Aaron has led training programs across Latin America, promoting the democratization of digital knowledge and the ethical use of technology in activism and social transformation.

BERTA VALLE • Berta Valle is a Nicaraguan journalist and human rights defender who spent 15 years as a television anchor before fleeing into exile in 2019. Married to pro-democracy leader Félix Maradiaga, who was imprisoned for 611 days by the Ortega regime, she leads international campaigns for over 140 detained activists. As co-founder of Voces en Libertad, Valle fosters exiled media collaboration and speaks at global forums including the Geneva Summit and Oslo Freedom Forum, advocating for nonviolent resistance and transnational solidarity while amplifying Nicaragua's human rights crisis.

ANAÏSE KANIMBA • Anaïse Kanimba is a Rwandan human rights activist and global development expert, daughter of Paul Rusesabagina who inspired the film Hotel Rwanda after saving 1,200 people during the 1994 genocide. When her father was kidnapped and imprisoned by the Rwandan government in 2020, she led the international #FreeRusesabagina campaign, securing his release after 939 days. A founding member of the World Liberty Congress and co-founder of the Africa Bitcoin Institute, Anaïse advocates against transnational repression and wrongful detention while championing democracy and human rights across Africa.

EDUCATORS

JEFF GARDNER • Jeff Gardner is a developer focused on building secure, censorship-resistant communication infrastructure on Nostr, pioneering new standards for encrypted group messaging without centralized servers. His work integrates Messaging Layer Security (MLS) with Nostr's decentralized network to bring Signal-level privacy to open protocols. Jeff is a leading advocate for permissionless, encrypted communication systems as the foundation of global freedom of speech and association.

ANTONIO RODRIGUEZ • Antonio Rodríguez, known as rodant, is an independent software developer and freedom activist. After leaving a career in mainstream tech in 2023, he began contributing to open-source Nostr projects. In 2025, his work has focused on the Pareto and Satshoot projects, developing tools that strengthen decentralized communication and digital freedom.

PABLO FERNANDEZ • Pablo Fernandez is a prolific Nostr developer best known for creating the Nostr Development Kit (NDK), a key toolkit that simplifies building Nostr applications. A software engineer and FOSS advocate for over 20 years and a former Linux kernel contributor, Pablo has long championed censorship-resistant communication infrastructure. Today he continues to advance tools for Nostr protocol development. He is currently building AGORA, a Nostr client that enables communities and activists to organize and communicate freely, with strong privacy and digital sovereignty at its core.

JESUS GONZALEZ • Jesús González is a Venezuelan engineer and freedom activist. He has trained hundreds of leaders in the use of Bitcoin within autocratic environments and is a founding member of the World Liberty Congress, where he leads the Decentralized Resistance initiative, connecting technology and civic movements for democracy. He is also the driving force behind AGORA.

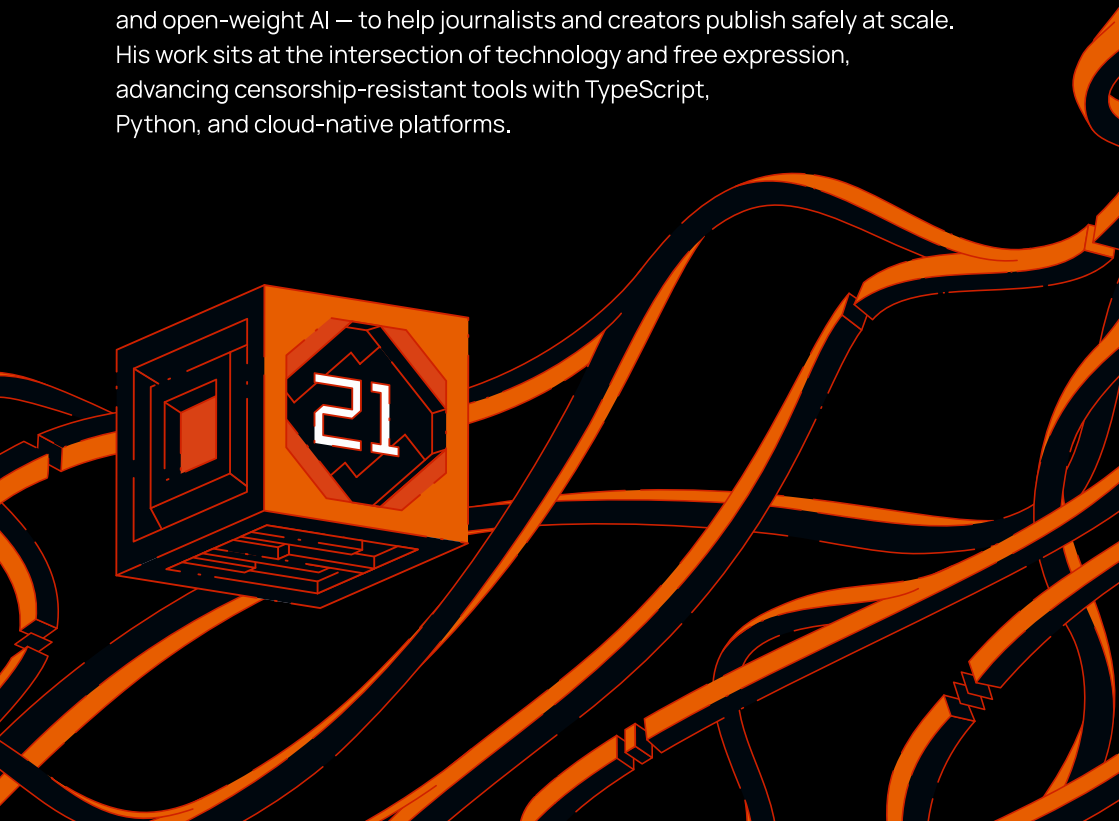

EDUCATORS

KUKKS • Andrew Camilleri, known as Kukks, is a pioneering open-source developer and Bitcoin advocate. As a core contributor to BTCPay Server — the leading self-sovereign payment processor — he has authored hundreds of features, enabling merchants worldwide to accept Bitcoin without intermediaries. Today Andrew serves as an executive at Ark Labs championing programmable Bitcoin solutions and empowering users with seamless, trust-minimized financial instruments to drive global adoption and resist financial censorship.

JUSTIN MOON • Justin Moon is the Technical Advisor for the Human Rights Foundation's AI for Individual Rights program, spearheading efforts to harness artificial intelligence as a tool for liberation in authoritarian regimes. A software engineering expert at the intersection of technology and freedom.

ZAVEN PETROSYAN • Zaven Petrosyan is a Senior Software Engineer from Armenia focused on decentralised publishing and AI systems. He builds backend and infrastructure for Layer3.press — leveraging Nostr, Bitcoin/Lightning, and open-weight AI — to help journalists and creators publish safely at scale. His work sits at the intersection of technology and free expression, advancing censorship-resistant tools with TypeScript, Python, and cloud-native platforms.
